

Lab 2: Agile Backlog Creation & Sprint Simulation in Jira

Student Name: Rajat Kooge

SRN: PES1UG24CS362

Scenario: Freelance Content Creator Escrow Platform

Reflection Questions

1. Did your estimations reflect the actual effort?

The estimations were reasonably close to the actual effort for most of the work items. Fibonacci story points helped represent the relative complexity, effort, and uncertainty of each user story. Some stories had higher points because they involved more complex functionality, such as automatic watermarking and secure milestone payment release.

2. Was your backlog well-prioritized?

Yes. The backlog was organized according to the main workflow of the Freelance Content Creator Escrow Platform. Milestone management was considered first, followed by deliverable submission and protection, deliverable review and approval, and finally escrow payment release. This ordering supports a logical progression from defining the work to completing the payment process.

3. How did your simulated sprint align with your plan?

The simulated sprint followed the planned Agile workflow. The user stories were added to Sprint 1, started in the To Do state, moved through In Progress, and were completed in Done. Sprint 2 was then used for final testing and verification. This demonstrated how planned backlog items can be executed and tracked using Scrum sprints in Jira.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed how work was completed against the expected guideline during the sprint. It provided a visual indication of completed and remaining story points and helped evaluate sprint progress. The chart also showed that the sprint scope and completed work could be compared with the planned capacity, which is useful for improving estimation and sprint planning in future iterations.

Conclusion: The Jira exercise demonstrated backlog creation, story estimation, sprint execution, status tracking, sprint completion, and burndown-based progress analysis using an Agile workflow.
